OIL FILTERS

Do you want your engine to live longer?

Every moving part in the engine requires clean oil for proper lubrication and lasting life. The oil filter cleans the oil as it circulates through the lubrication system. The oil filter captures abrasive contaminants so that engines moving parts won't be damaged. Prefer FIBA oil filters in order to protect your engine from premature wear.

AIR FILTERS

Your engine needs to breathe fresh air. The air filter removes carbon, soot, abrasives and other contaminants from the air before the air mixes with fuel in the engine induction system. FIBA air filters have the ability to trap microscopic dirt that can damage cylinder walls, pistons and piston rings.

FUEL FILTERS

The major impurities that may be in the fuel are water, scale, dirt and rust. If you want these contaminants not to get into your engine and damage your fuel-injection system or carburetor, then you must prefer FIBA fuel filters. The essential component of our fuel filters is to keep your fuel system in very good condition, out of any trouble and help your engine's life to last for a long period of time.

CABIN AIR FILTERS

The purpose of cabin air filters is to filtrate the internal air of your vehicle. FIBA cabin air filters keep smoke, dust, pollen, soot and other pollutants away from the air of your vehicle. So passengers breathe clear air as disagreeable and harmful smells, often experienced in traffic jam, are absorbed.
